

[CS304] Tutorial 3 - GitHub Project Management

In this lab session, we will learn how to use **GitHub project** for project management.

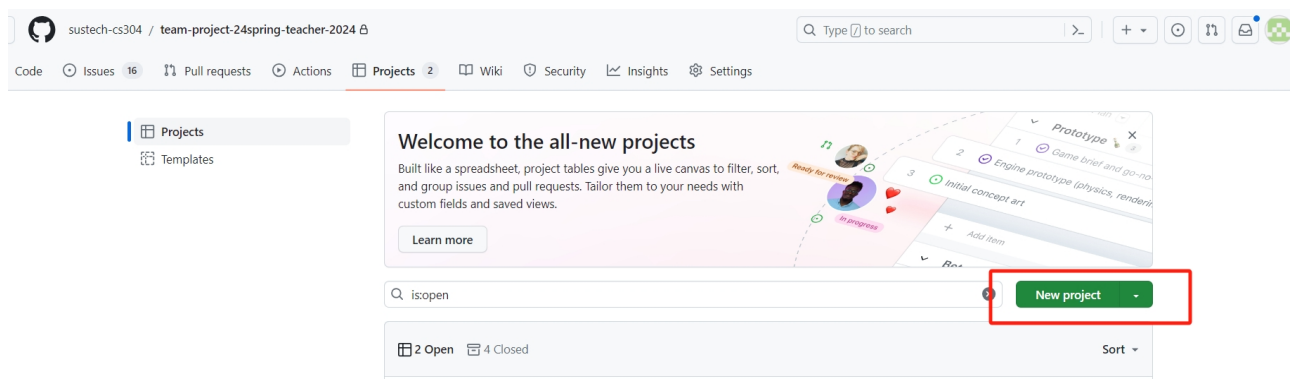

GitHub Project Management

GitHub provides a flexible way to track and manage projects.

GitHub Projects guide: <https://docs.github.com/en/issues/planning-and-tracking-with-projects>

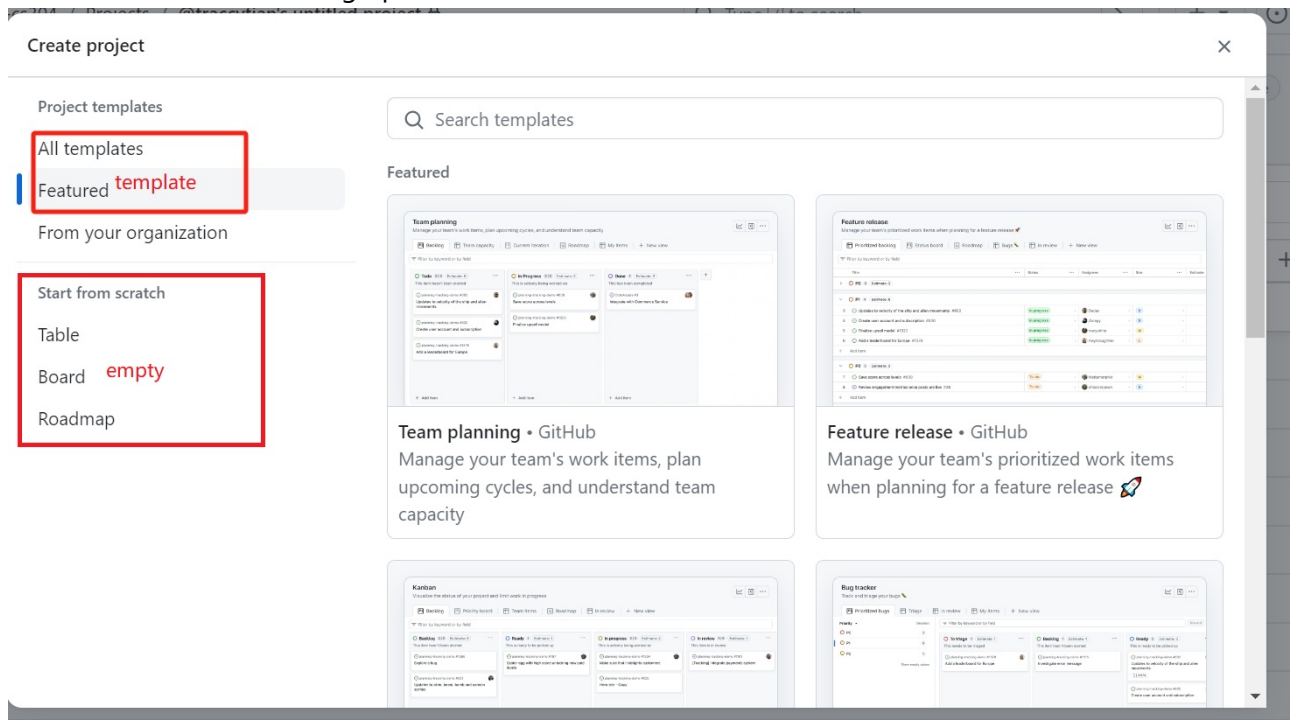

1 Create a Repository Project

1. Navigate to your GitHub Teedy repository(Cloned last week) and click on the **Projects** tab.

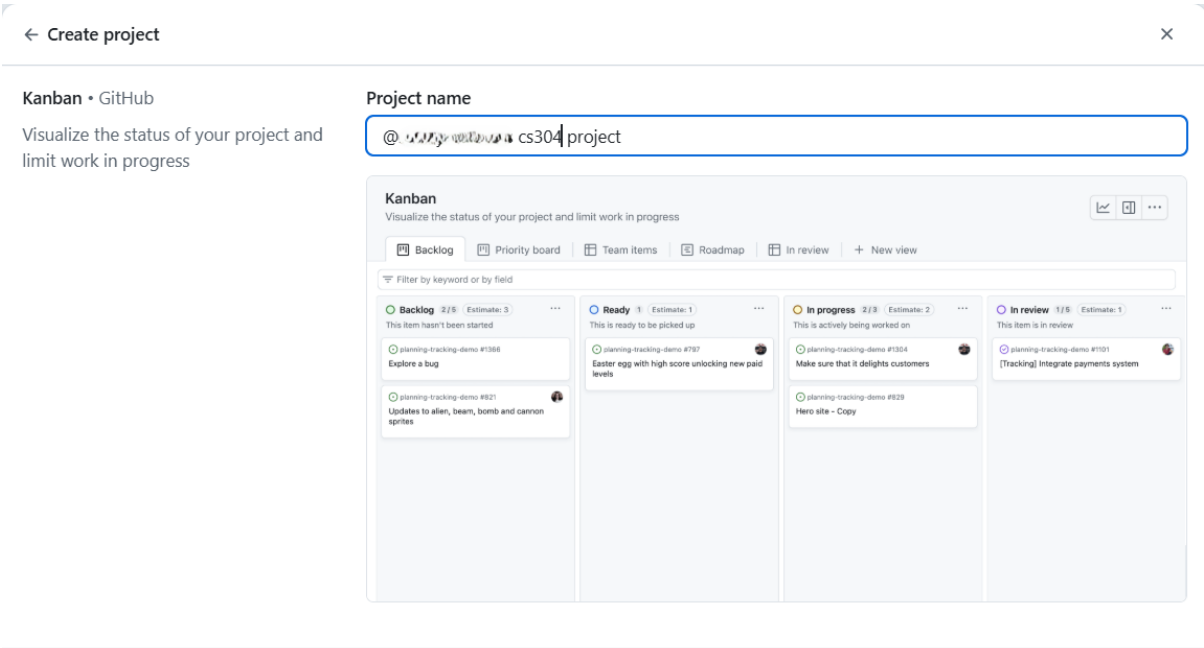

2. Select **New project**.

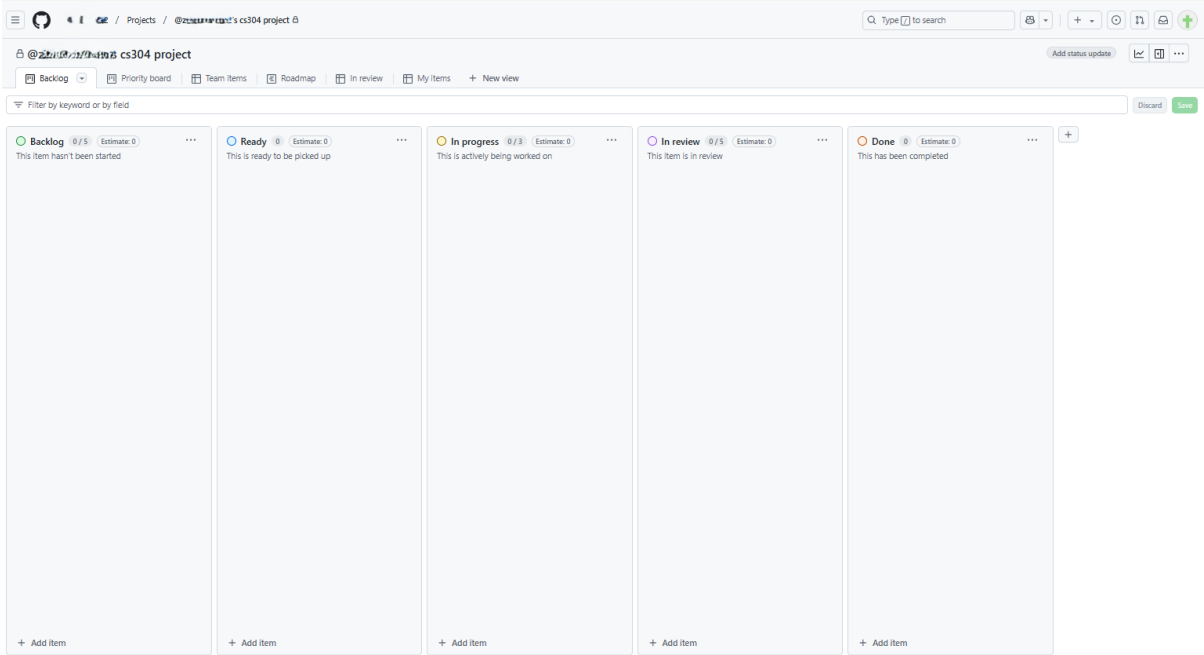

3. Choose one of the following options:

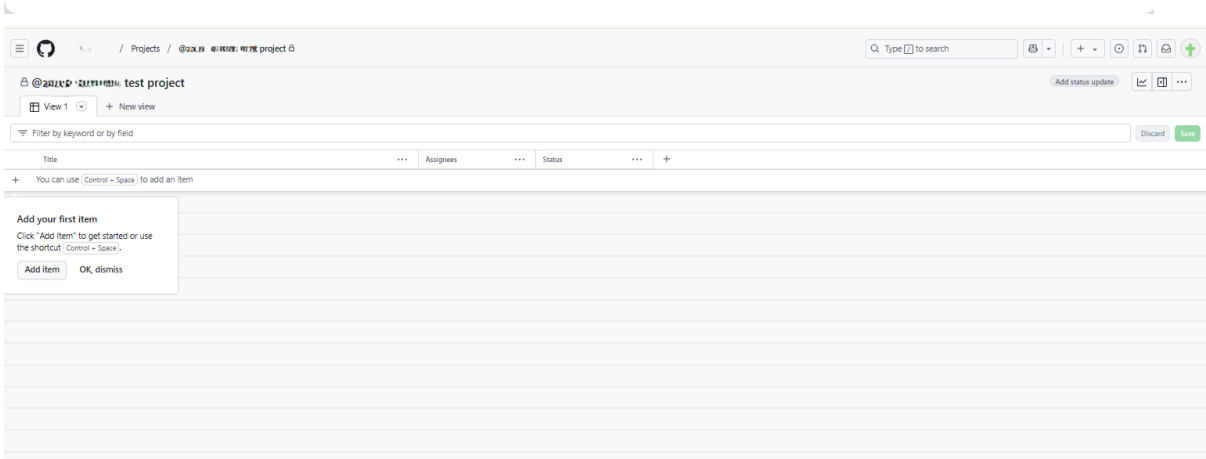

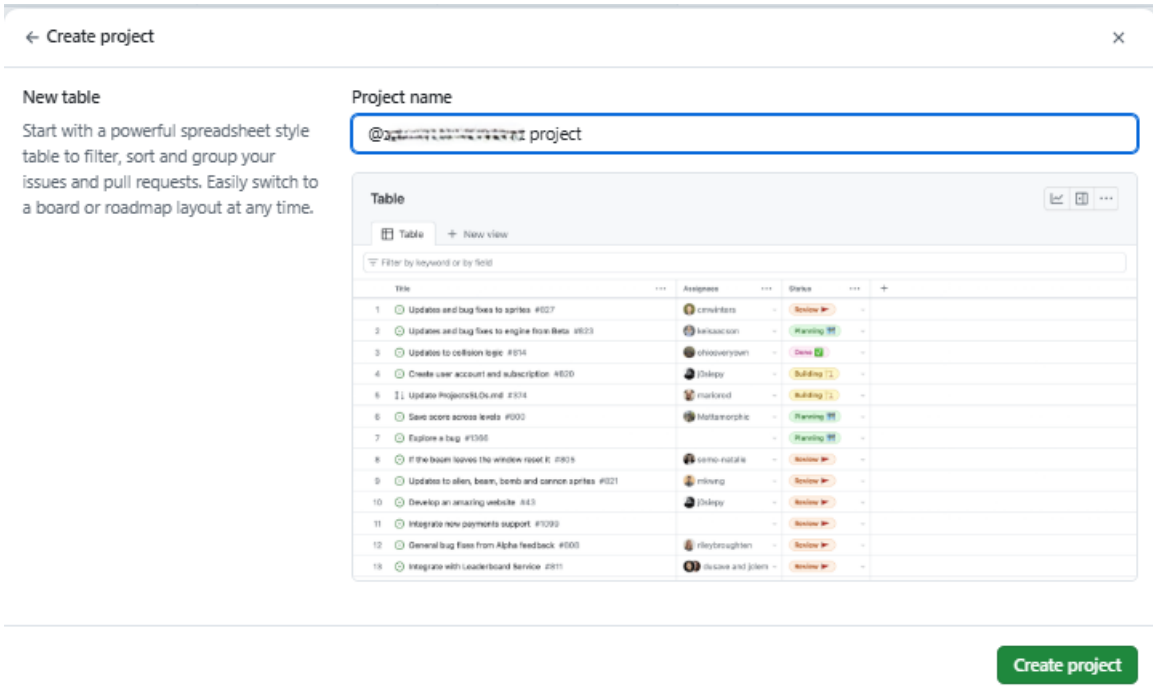

- **Use a Template:** Select a pre-built template such as **Kanban**.

Enter a project name (e.g., "CS304") and click **Create project**.

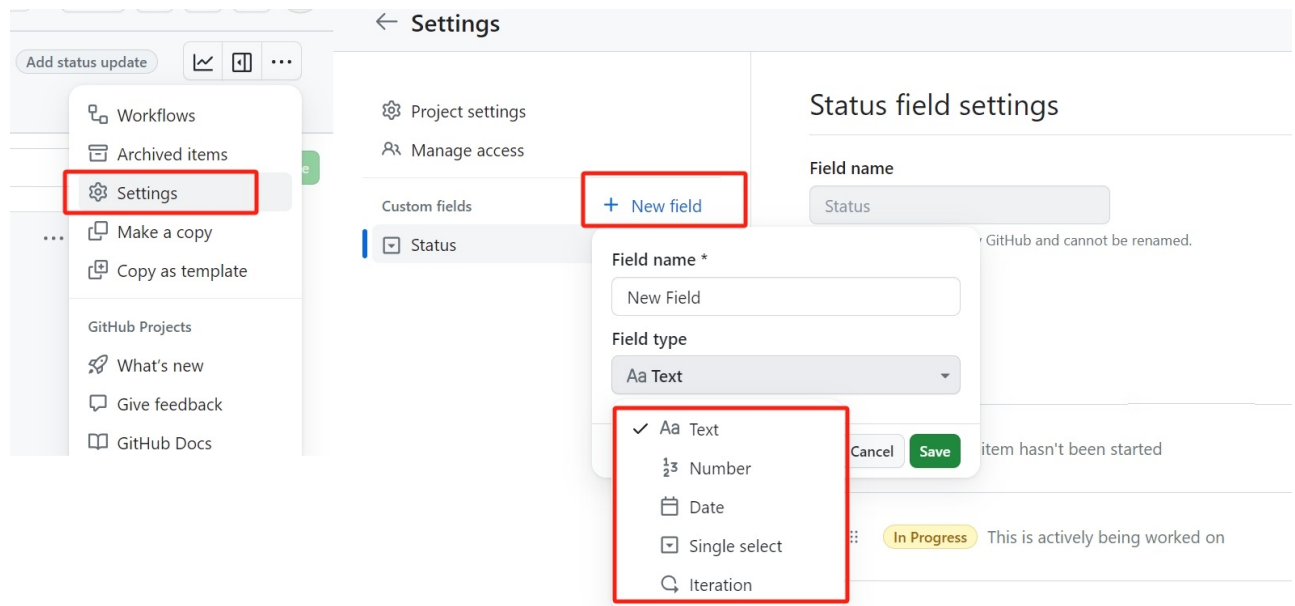

- **Empty Project:** Start from scratch by selecting **Table**, **Board**, or **Roadmap**.

2 Customize Your Project

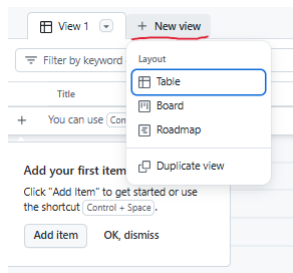

Managing Fields

1. Click the **...** menu in the top-right corner.
2. Select **Settings**.
3. Click **+ New field** to add custom fields (e.g., Priority, Estimated Hours).

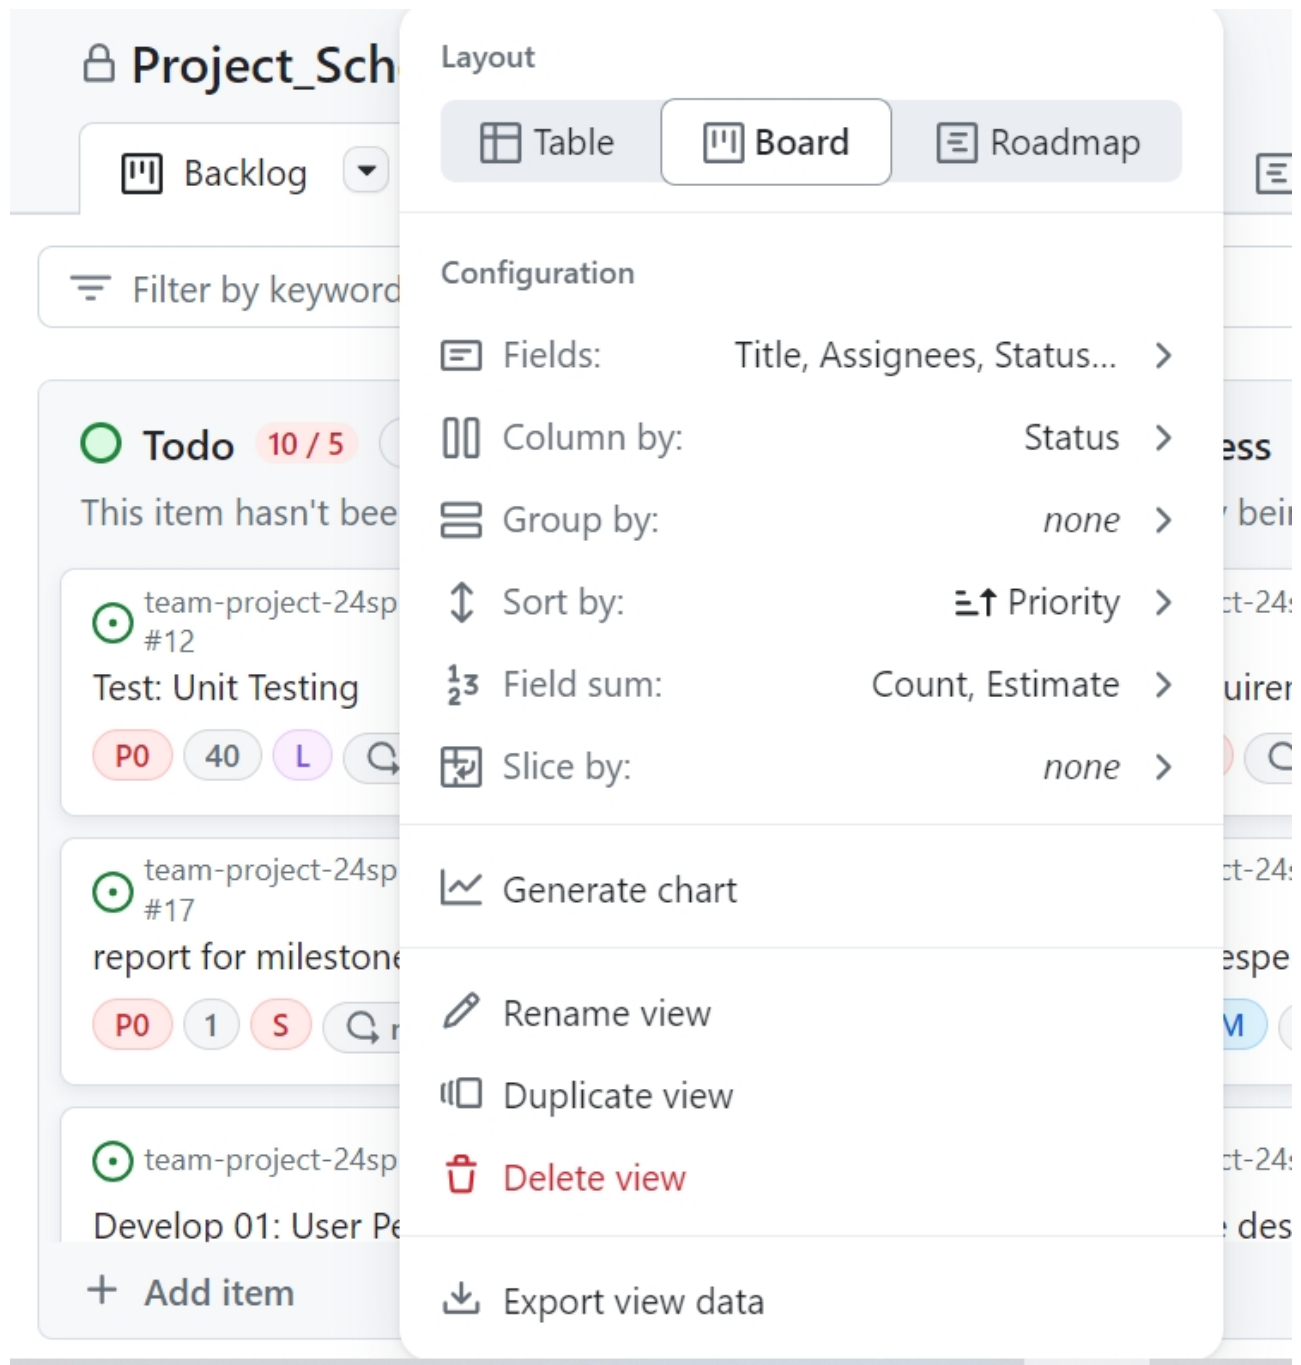

Managing Views

- **Add view:** Click + New view and choose Table, Board, or Roadmap.

- **Customize views:** Click the triangle beside a view name to modify its settings.

3 Item Management

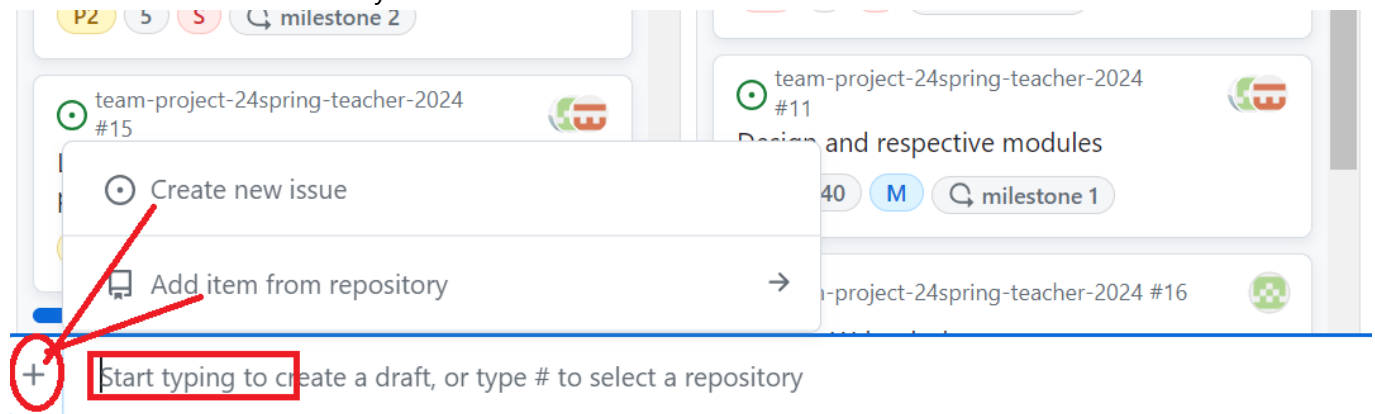

In GitHub Projects (the new Projects / Projects Beta), a project is not tied to a single repository by default. Instead, it works like a global database of items (issues, PRs, drafts) that can come from any repository you have access to. That's why when you add items, you see issues from all your repositories, not just the current one.

Projects in GitHub are designed to be cross-repository planning tools. So a single project board can track work from: multiple repositories, multiple teams, even multiple organizations. For example, a project could include:

- an issue from repo-A
- a PR from repo-B
- a draft task not tied to any repo

Adding Items

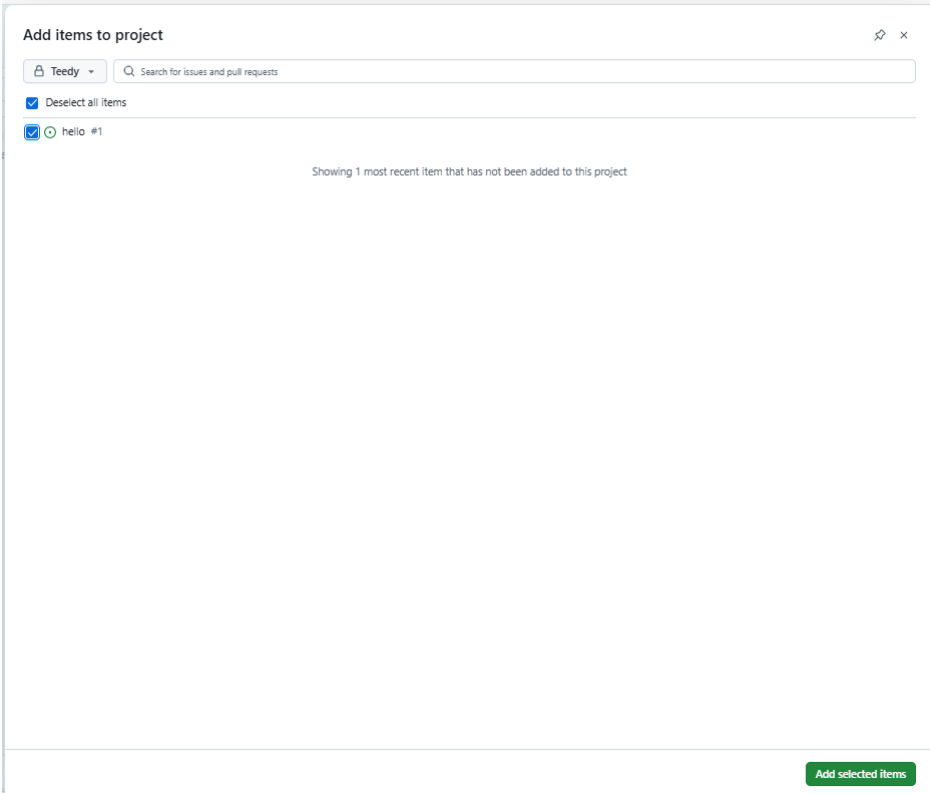

You can add tasks in three ways:

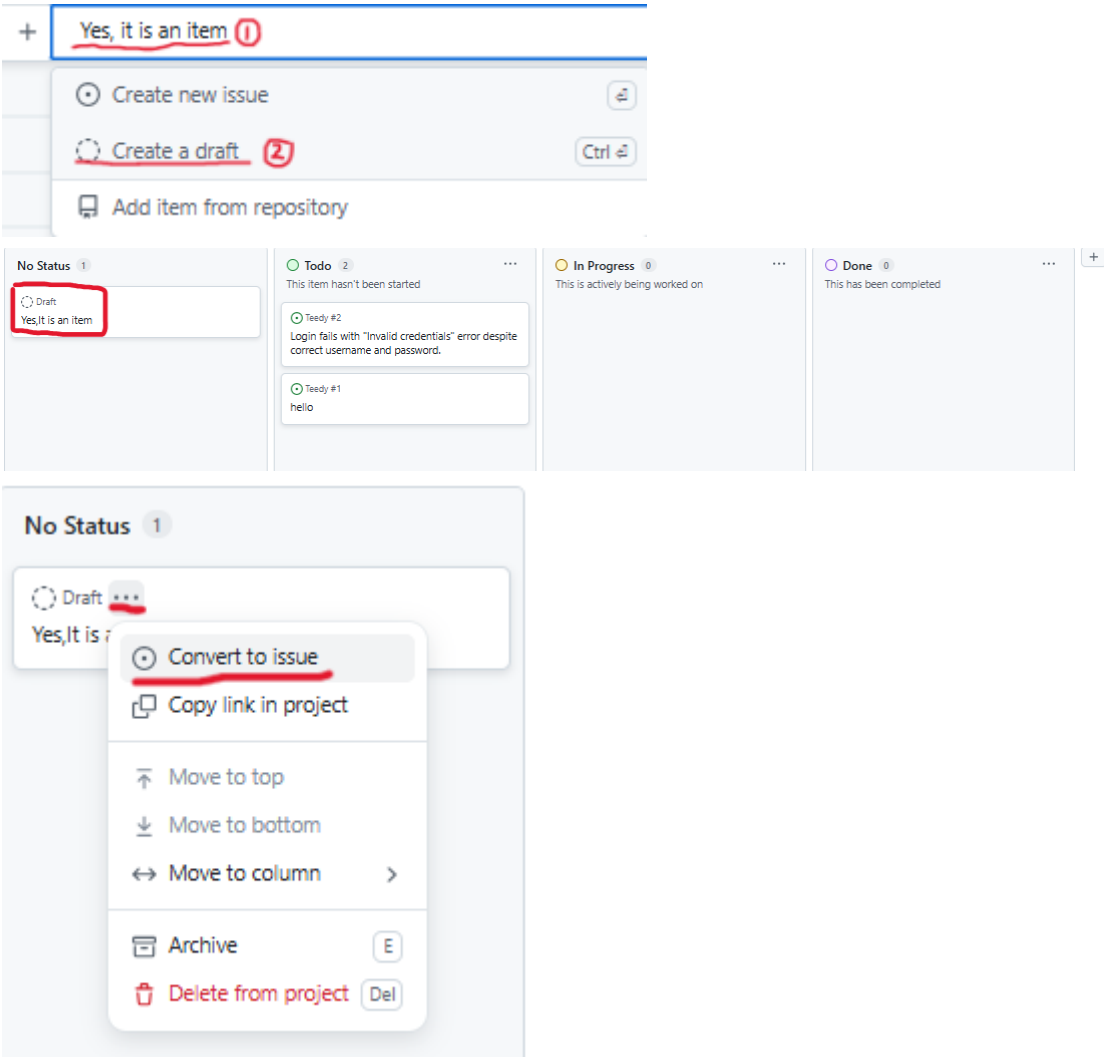

- **create new issue:**

A screenshot of the 'Create new issue' form in GitHub. The title is 'Login fails with "Invalid credentials" error despite correct username and password.' The description includes steps to reproduce the issue, expected behavior, and actual behavior. The form has a 'Write' tab and a 'Preview' tab. The 'Write' tab is active, showing a rich text editor with various formatting options. The 'Preview' tab shows the rendered HTML. The form also includes a 'Create more' checkbox, a 'Cancel' button, and a 'Create' button.

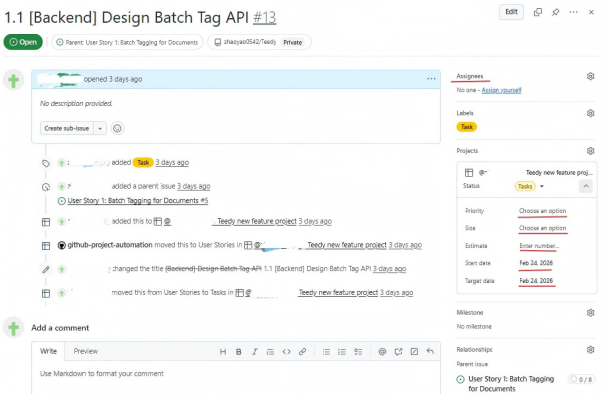

- **add item from repository:**

- Create a draft then convert it to issue:

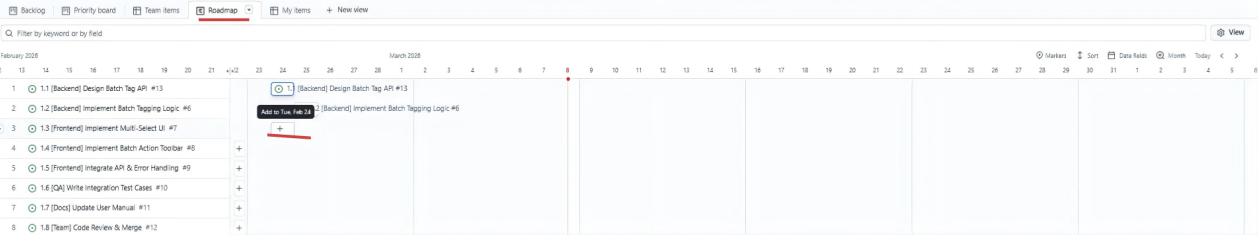

Click on an item in a view to edit its details.

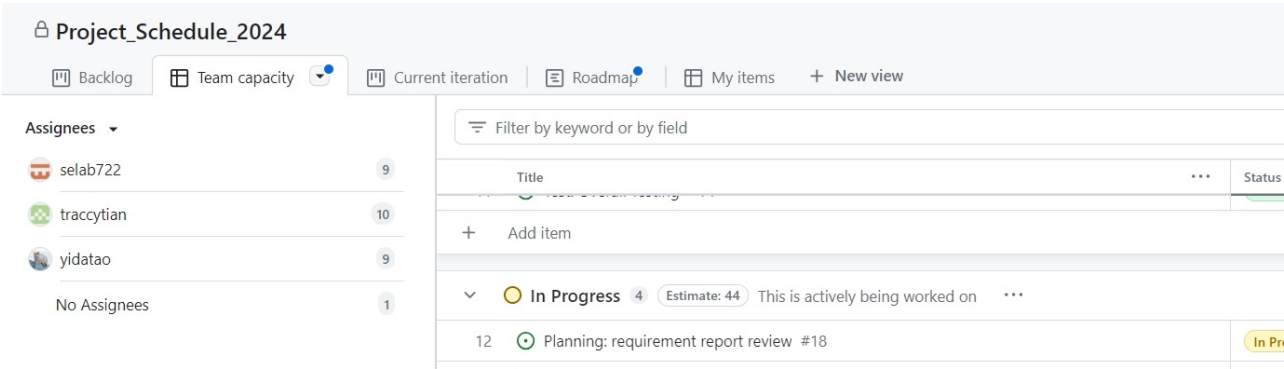

Adjust the Timeline

Switch to **Roadmap** View, you can drag and drop the item bar to adjust the start and end dates visually:

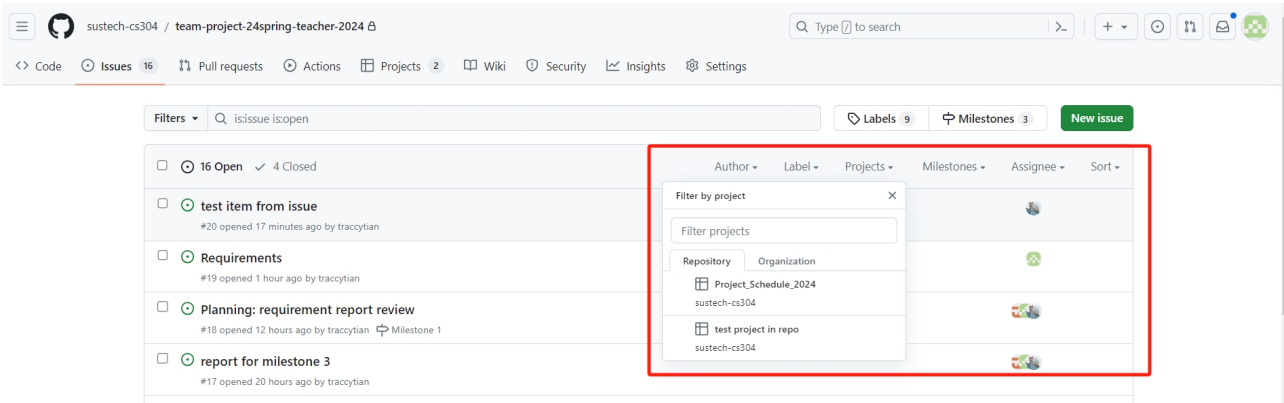

Tracking Items

- Use the **Board View** to track task progress (To Do, In Progress, Done).

- View the repository Issues for a complete list of tasks.
